

Take advantage of the **best fuel gas** for heating  
with a **natural gas pressure booster**

**Natural gas is the best choice for heating and a G-TEC System will supply all the gas you need!**

The G-TEC Natural Gas Pressure Booster System connects to your building's utility natural gas service then boosts the pressure for high performance and significant cost savings when compared to acetylene, propane and other cylinder gases. A G-TEC Pressure Booster lets you use your utility gas service to supply high-pressure natural gas at savings up to 90%.

### **Get High Quality Performance**

- Natural gas has more heat in the secondary flame, allowing a broader area to be heated more quickly
- Natural gas can be used to any pressure – no 15 psi limit
- No valve icing problems with high gas flow rates

### **Save Money And Eliminate Purchase Orders**

- Natural gas is the least expensive fuel per 100,000 BTUs
- Pay for fuel gas when you use it, not when you fill the tank – the gas utility holds your inventory
- Stop paying cylinder rental and delivery charges

### **Never Change Fuel Gas Cylinders**

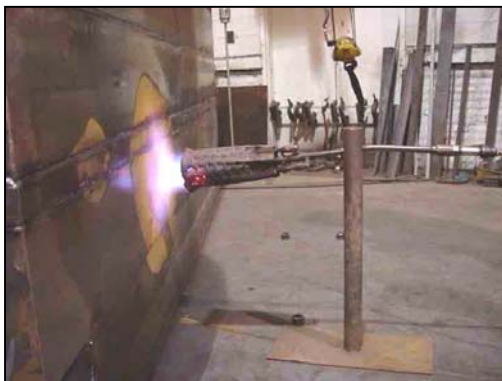

- G-TEC Torch Boosters provide all the gas you need without cylinders
- No unproductive time spent ordering, storing, moving or changing cylinders

### **Natural Gas Is The Safest Fuel Gas**

- Eliminate the hazards of propane – no cylinder storage problems, no bulk fuel tanks on your property

### **Easy To Use**

- Simple to install in any facility with natural gas

**Approved By CSA-International  
For Installation Anywhere!**

G-TEC Natural Gas Pressure Boosters are approved for design, performance and safety. Building Inspectors and Fire Marshals will approve G-TEC installations without question.
